**OUTLOOK** Asian markets ended mostly lower on Tuesday as investors fretted about the impact of rising interest rates, US-China tensions and Italy's decision to expand budget deficits. The trade war between China and the United States may intensify after China allowed its currency to slip past a psychological bulwark. The International Monetary Fund has lowered its forecast for Chinese economic growth in 2019 to 6.2 percent from 6.4 percent, citing the 'negative effect of recent tariff actions'. Japanese shares ended lower as a firm yen added to investors' worries over China and rising US bond yields. Though, Chinese shares finished modestly higher amid bets that policymakers will increase policy support to counter the negative impact of an escalating trade war on Chinese exporters. Meanwhile, the South Korean markets were closed for a public holiday. Meanwhile, the International Monetary Fund (IMF) in its latest World Economic Outlook (WEO) report has retained India's economic growth forecast at 7.3% for the current year 2018. Though, it is lower than the government and the Reserve Bank of India's (RBI) forecasts. However, IMF lowered the country's growth projections by 0.1 percentage points to 7.4% for 2019, given the recent increase in oil prices and the tightening of global financial conditions. In 2017, India had clocked growth rate of 6.7%.

## **TRADING STRATEGY:** As on (01/10/2018)

### **BULL CALL SPREAD:**

The bull call spread option trading strategy is employed when the options trader thinks that the price of the underlying asset will go up moderately in the near term. Bull call spreads can be implemented by buying an at-the-money call option while simultaneously writing a higher striking out-of-the-money call option of the same underlying security and the same expiration month.

#### Bull Call Spread Construction

Buy 1 ITM Call  
Sell 1 OTM Call

Maximum gain is reached for the bull call spread options strategy when the stock price move above the higher strike price of the two calls and it is equal to the difference between the strike price of the two call options minus the initial debit taken to enter the position.

Max Profit = Strike Price of Short Call - Strike Price of Long Call - Net Premium Paid - Commissions Paid  
Max Profit Achieved When Price of Underlying  $\geq$  Strike Price of Short Call

**EXECUTION: BUY NIFTY 10900 CALL AROUND 215-210 AND SELL NIFTY 11200 CALL AROUND 90-95, TOTAL PREMIUM RECEIVED AROUND 120, TGT 155-195. SL AS PER TRADERS CHOICE.....**
