METHODOLOGY:

-  The Portfolio adopts a quantitative and qualitative approach to portfolio selection.
-  The Portfolio is based on combination with an understanding of individual stocks and economic condition to determine a suitable equities portfolio.
-  The portfolio is designed for Short term purely on technically sound securities recommendation. Hence on regular intervals profit booking is necessary.

Note: As all above stocks are purely selected on the basis of technical Analysis Hence it may be possible that fundamentals of some stocks are not in line as per standard mode of acceptance. ***Hence only Risky traders with short term duration (less than 1 year) will accumulate these stocks at prescribed levels.*** Moreover all above stocks are currently corrected from their highs and right now trading their near by support levels. There is a possibility that spot index may further continue its southward journey near to 7700-7750 due to current economic scenario but we believe recovery should be round the corner as technical indicators showing some sign of revival.
